## MICROFIBER TUBE STRING MOPS

The IPC Eagle innovative Microfiber Tube String Mop is made from 100% microfiber fabric sewn into tubes to form the “yarn” of the mop. Because microfiber has millions of microscopic fibers, it picks up dirt and absorbs liquids far better than traditional mop yarn. The Microfiber Tube String Mop is an excellent choice for general purpose cleaning or spill pickup. As an added bonus, the wide headband is made of a rough scrubber cloth that can be used to remove dried-on dirt and is offered in a three color coding system to prevent cross-contamination.

### All the Power of Microfiber in a Tubed End Mop Design

This micro-fiber mop is the answer to the traditional cotton string mop. More absorbent than any cotton mop, and it dries twice as fast!

### Won't Get Tangled

The design of our Microfiber String Mop ensures even coverage without tangling during use or the laundering process.

### Great for Spills

Highly recommended for cleaning up spills and leaving a dry surface behind. It is a great choice for restaurants, including fast food, grocery or convenience stores or any other application where spills are common.

### Machine Washable

Save money over traditional cotton mops that wear fast after several launderings. This mop will stand up through hundreds of washings.

### Increase Productivity

Our Microfiber products are so efficient and easy to use, you'll almost feel lazy! You'll be finished with the job in a fraction of the time!
