To Whom It May Concern:

The product **Biosan Rapide WT** contains an active substance that we are supporting under the EU BPR, and we can be found on the ECHA list of participants/Article 95 list, which can be searched using our company name. The relevant entry is on page 42 of the list accessed via the link below, and we are listed as the Data Submitter, the Participant and the Substance supplier.

https://echa.europa.eu/documents/10162/17287015/active_substance_suppliers_en.pdf

The active substance is an existing active substance that is still undergoing evaluation, and therefore is within the transition period of the full implementation of BPR. This allows biocidal products containing this active substance, if supplied by ourselves, to be marketed without product registration.

During the transition period, local rules apply in individual EU countries, so suppliers should check what these local rules are in the countries where they intend to market the product.

We can also confirm that the product has been tested and shows that when used as directed, it has anti-bacterial activity within the application environment i.e. waste tanks in floor cleaning machines.

The active substance has also been tested by an external laboratory and was demonstrated to have anti-viral effects against enveloped viruses HIV, Hepatitis B and Hepatitis C.

Signed:

Philip Caunt, Technical Specialist
